TRAIN TO CLIMB

/
A P P A R E L

At Salewa, we view training for climbing and maintaining a good level of core fitness as a natural part of life. It's true what they say – you can never have enough power. However, training is not just about getting better and stronger. In today's fast-paced, screen-based world, it's easy to neglect what is important. Training provides us with an opportunity to be curious and generate energy and focus. Training is about playing, enjoyment and having fun, just like climbing itself. Training to climb is a mindset – and an exuberant approach to life.

For Spring Summer 2021, we are rolling out a new fabric for use specifically in our Alpine Climbing collection – Alpine Hemp. We know that climbers enjoy wearing natural, comfortable and sustainable clothing. We understand that they want breathability and thermoregulation for high levels of aerobic activity. We know that they want freedom of movement and stretch functionality for athletic moves. This is why we have chosen to make a new selection of Alpine Hemp apparel with hybrid blends and innovative constructions.

NATURAL MINERALS

/
RESPONSIVE TECHNOLOGY

Responsive is a smart fabric technology based on far-infrared (FIR) radiation. Responsive contains a blend of naturally-occurring, thermoreactive minerals. The active particles are blended to make a master batch, which is applied as a fabric print or loaded into high-performance synthetic fibres which are combined with other yarns to make unique hybrid fabrics for specific activities.

The blend of natural minerals in Responsive absorbs the heat your body emits and recycles it into infrared light. Think of the way that a south-facing rock face stores energy from the sun and then gradually releases it over time. During periods of activity, this penetrates deep

into muscle tissue, resulting in greater energy, more efficient thermoregulation, increased blood flow, enhanced cellular performance and higher oxygen levels, which in turn improves physical performance and cognitive focus. During rest periods, infrared light enhances microcirculation, making the user feel warmer and more comfortable. It also reduces muscle fatigue and promotes faster recovery.

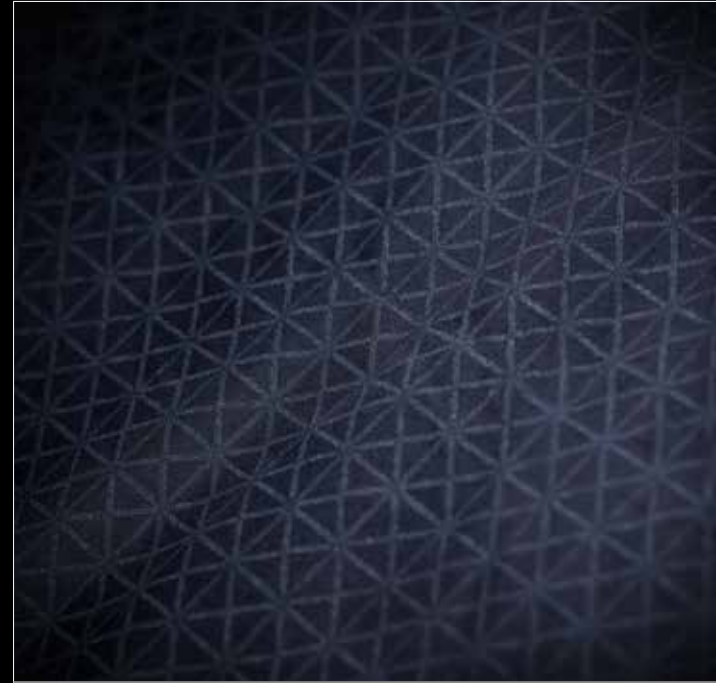

Responsive smart fabrics are scientifically proven to enhance thermoregulation, performance and recovery, as muscles benefit from improved circulation and increased oxygen levels.
